

About the Book

Globally, there is a need to promote and empower practical action towards better environmental conservation and greater sustainability; education aspires to achieve motivate this – one at a time. This book advances a future-oriented vision of the development of environmental sustainability education in settings outside the high-school. It provides practical guidance for teacher practitioners and policy makers in community-oriented environmental sustainability education. It promotes a modern holistic approach to sustainability learning in and by the community through participative engagement with sustainability issues. Its special foci include working with volunteers and citizen scientists, through re-purposing higher education. Its approach emphasizes the implementation of the united nation's sustainable development goals and cooperation with environmental management professional. This book's cosponsors include the international association for Headwater Control and FAO- European Forestry Commission's Working party on the management of mountain watersheds, as well as the international environmental education conferences, Eger Hungary and the Hungarian Academy of Science's subcommittee on future studies community education has long been a goal for environmental management, whose practitioner's realize that interventions, such as biodiversity conservation are only truly sustainable when supports by the land user and stakeholder communications; this depends upon these stakeholders understanding why intervention is necessary.
