

## **About The Book**

The book has been written keeping in mind that waste of all types has become a major environmental hazard and its timely solution is a must for the survival of mankind. It focuses on one of the most important environmental issues of contemporary times that is limiting waste and treating it for a purposeful objective of generating energy. The book targets the use of technology for converting waste- to- energy. It is anticipated that the book may be of interest to graduate and post graduate students.
