

About the Book

Mango, the king of fruits, holds a prime position in fruit crops of the country. The crop production, besides the perennial affliction of biennial bearing, is also hampered by many diseases/disorders. The dawn of W.T.O. regime demands an extreme degree of quality control. The present book takes a comprehensive account of the scenario, addresses the problems in the right perspective and offers judicious solutions. Realising the state of affairs, the author, a renowned mango pathologist, has compiled scattered information on the mango diseases/disorders and filled the existing vacuum in the subject.

Contents:
